Phase 1 Internship Report

BrainSync

Company Name: XMega

Intern Name: Janhavi Kishor Patil

Internship Period:

December 5, 2025 to January 5, 2026

Company Mentor	**Guide**
Udayraj sir	Y.D.Bhise Mam

1.1 Introduction to XMEGA

XMEGA is a pioneering software development company dedicated to crafting digital solutions that enhance business performance. As a leader in revolutionizing technology, XMEGA focuses on innovating tech solutions to tackle future challenges through a team of dedicated and skilled engineers. The company is committed to pushing the boundaries of innovation and defining the future of technology rather than just shaping it.

1.2 Mission and Values

XMEGA's mission is to craft bespoke software solutions that address diverse needs, empowering businesses to thrive in the digital age. The organization prides itself on a commitment to excellence, ensuring clients receive cutting-edge solutions that drive success. Key pillars of the XMEGA experience include:

- **Technological Excellence:** Driving innovation from applications to robust systems.
- **Client Centricity:** Prioritizing the understanding and fulfillment of client objectives.
- **Quality Assurance:** Maintaining top-notch quality through unwavering dedication.
- **Reliability:** Offering 24/7 support and professional staff to ensure long-term partnerships.

2. Role and Responsibilities

2.1 Intern Role

During Phase 1 of my internship, I served as a Full-Stack Developer on the **BrainSync** project. My role involved translating product requirements into functional code, ensuring the application met modern security and accessibility standards.

2.2 Daily and Weekly Tasks

- **Feature Development:** Implementing core modules for Braille conversion and multi-modal input.
- **Backend Integration:** Setting up database schemas and authentication flows using Supabase.
- **UI/UX Implementation:** Developing responsive layouts and interactive components using Tailwind CSS and shadan/ui.
- **Documentation:** Maintaining the Project Requirements Document (PRD) and technical guides.

2.3 Skills Acquired

- **Technical Skills:** I gained proficiency in **React 18**, **TypeScript**, and **Vite**. I also learned to manage backend services with **Supabase**, including Row Level Security (RLS) for data protection.
- **Soft Skills:** I enhanced my professional communication, teamwork, and time management skills by working within a structured development lifecycle at XMEGA.

3. Project Overview – BrainSync

3.1 Project Name and Purpose

Project Name: BrainSync (Braille Sync)

Purpose: BrainSync is an accessible, secure web-based translation platform that converts regular text into Braille. It is designed to be a versatile tool for diverse accessibility needs, supporting various input methods to ensure that information is accessible to the visually impaired community.

3.2 Key Features Developed in Phase 1

- **Multi-modal Input Support:** Users can input data via direct text, image (OCR), audio file upload, or real-time microphone recording.
- **Visual Braille Display:** Authentic Braille characters are generated in real-time.
- **Audio Feedback:** Integration of text-to-speech for translations.
- **Secure Authentication:** A full system for user sign-up, login, and profile management.

.

3.3 My Contributions

I was responsible for implementing the **Authentication System** and the **Translation History** dashboard. I ensured that all user data was isolated via Row Level Security, allowing users to save and manage their personal translation records securely.

4.Challenges and Problem Solving

4.1 Technical Challenges

- **Data Security:** A major challenge was ensuring that each user's translation history remained private and secure.

  Solution : I implemented Supabase Row Level Security (RLS) policies to ensure that users can only access their own data, providing a secure environment for sensitive information.

- **Multi-Modal Integration:** Coordinating different input types (OCR, Audio, Text) into a single unified output.

  Solution: I utilized custom React hooks and a centralized utility engine (`braille.ts`) to handle the bidirectional conversion logic.

4.2 Accessibility Challenges

- **WCAG Compliance:** Ensuring the site was navigable for those it was intended to serve.

  Solution: I integrated semantic HTML, ARIA labels, and high-contrast color schemes (Deep Blue and Soft Yellow) as outlined in the PRD.

5. Career Impact and Acknowledgements

5.1 Career Impact

This internship at XMEGA has been instrumental in my professional growth. Working on a project like BrainSync taught me how to apply cutting-edge technology to solve real-world accessibility challenges. I have developed a strong foundation in full-stack web development and learned the importance of "accessibility-first" design, which will be a cornerstone of my future career in software engineering.

5.3 Acknowledgements

I would like to extend my sincere gratitude to my mentors at **XMEGA** for their guidance and for fostering an environment of innovation. I also thank my college guides and the engineering team for their support in helping me complete this phase of the internship project successfully.

6.Conclusion

Based on the Phase 1 development of the BrainSync project at XMEGA, the following paragraph provides a detailed conclusion of the internship experience:

The successful completion of Phase 1 of the BrainSync project marks a significant milestone in XMEGA's mission to revolutionize accessibility through technology. By establishing a secure and high-performance infrastructure, the project has transitioned from a conceptual framework into a functional multi-modal translation platform. Key achievements of this phase include the integration of a complex React 18 frontend with a secure Supabase backend, proving that high-level security and user-centric accessibility can coexist seamlessly. BrainSync innovates by offering image OCR and audio transcription alongside standard text-to-Braille conversion, directly addressing the diverse ways in which visually impaired individuals interact with digital content. By utilizing Row Level Security (RLS) and protected routing, the platform ensures that personal translation data remains strictly isolated, fulfilling XMEGA’s promise of providing professional, reliable, and bespoke digital systems. Ultimately, this phase has provided a scalable foundation for future expansion, demonstrating the profound social impact of inclusive design and reinforcing XMEGA's position as a leader in defining the future of technology by dismantling barriers to information.
